

About Us

Lean Solutions Limited is dedicated to helping your organization achieve its goals through the application of the principles of Lean. Our workshops are designed to teach your staff these principles so that your employees lead the transformation of your company. Your employees will become experts on Lean and retain this knowledge long after our workshops are over.

Our **Workshop Solutions** use classroom training to impart the principles of Lean to your staff. This training is reinforced using realistic case studies. Workshop participants are then given a project to complete within your organization and guided by an expert trainer. Thus, you see immediate results from the training, which quickly pays for itself. After the workshop is over, participants are able to reapply these principles and techniques without further consultation. Typically one or two follow-up days are required to assess the work done following the workshop. Occasionally, some organizations prefer a second workshop to reinforce the training.

Lean Solutions Limited also offers several **Implementation Solutions**. One of our experts will work with your organization on a short term, full-time basis to offer **On-Site Lean Implementation**. We will help your organization to transform both its culture and value streams. We can also provide full-time **On-Site Lean Project Management** to demonstrate the advantages of Lean techniques in the area of **Product Development** and other projects. In the process, we will also teach these techniques to the rest of your team so that your organization may continue to apply them after the project is over.

Lean Solutions Limited is a founding member of the **Canadian Association for Lean Product Innovation**. Through this association, we have become certified in delivering the **Lean Product Development** series of workshops created by Technology Perspectives, a US-based educational firm. **Lean Solutions Limited** also has a working relationship with **Duggan & Associates Inc.**, and are certified to deliver their **Mixed Model Value Streams** and **Shared Resource Flow** workshops.
